# SKI SLOPE USERS RULES

## SAFETY – RESPECT – COURTESY

**1** 

**Speed**
Adjust your speed according to your ability, your physical condition, the slope and weather conditions, visibility, safety signage and the number of other people on the slope.

**2** 

**Caution and Diligence**
Always act with prudence, diligence and caution to avoid endangering your own safety or that of others.
Reduce your speed in areas with poor visibility, near obstacles, construction sites, junctions, and intersections, as well as in conditions involving fog, haze, overcrowding, narrow passages, or the presence of beginners.

**3** 

**Safety Distance**
Maintain a sufficient safety distance from other users, as well as from structures and/or snowmaking equipment. In doing so, take into account the characteristics of the terrain, visibility conditions, and the specific features of your own equipment.

**4** 

**Descent path**
A user approaching from above must choose their line of travel in such a way as to avoid collisions, obstructions, or hazards involving other users who are further down the slope.

**5** 

**Right of Way for Vehicles**
(Mechanically powered) vehicles on the slopes are equipped with warning lights and audible signals. Yield the right of way to these vehicles and do not obstruct their movement.

**6** 

**Entering and crossing a slope:**
Ensure that you do not endanger other users when entering or crossing a slope.

**7** 

**Intersection of Slopes and Ski Paths**
Exercise particular caution at intersections. You must adjust your line of descent if other users are approaching from different directions—even if they are arriving from above. In any case, you must reduce your speed.

**8** 

**Stopping on the slope**
Whenever possible, avoid stopping in narrow sections, near the crest of a slope, or in any other area with limited visibility. If you must stop, move to the edge of the slope and ensure you do not pose a hazard to other users.

**9** 

**Fall**
In the event of a fall or accident, clear the slope as quickly as possible and, if necessary, move to the edge of the slope.
Everyone must use appropriate means to indicate the presence of an injured person. Anyone who finds a person in difficulty on the ski or snowboard slopes is obliged to provide the necessary assistance and immediately report the accident to the slope operator via one of the designated emergency call points.

**10** 

**Accidents and Insurance**
Ensure that you have valid liability insurance covering damages to third parties. If you are involved in an accident, witness an accident, or have provided assistance to a user in distress, you must provide your personal details upon request to the ski patrol or other authorized supervisory personnel.

**11** 

**Equipment Retention and Braking Devices**
Use the slopes only with skis, a monoski, a snowboard, telemark equipment, or similar gear. Such equipment must be equipped with retention and braking devices to ensure that, in the event of an accidental detachment, it does not pose a danger to others.

**12** 

**Storing Equipment**
If you leave your equipment behind—for instance, while visiting a ski hut or at any other location—it must be placed outside the designated ski slopes and, in any case, in a manner that does not obstruct or endanger others.

**13** 

**Prohibition of Access to Training Slopes**
Ski slopes that are closed or cordoned off for training purposes must not be entered or skied upon.
